New zdint5 polypoptides, useful for diagnosing, preventing or treating rumor formation, Crohn's disease, inflammatory bowed disease, food poliening, melanoma, degenerative disease, batterial infection, or for wound healing

Claim 2; Page 32-34; 37pp; English.

The mirements or states to an assisted polypoids, statists, of distincents and metalloprocease [AMM], the gues for which is located on human formerness [94], a comprising the metalloprocease death. Interdepondant (Commisses [94]) and starte process. In the statistic process, in the statistic process of the statistic process. In the statistic process of the statistic process of the statistic properties of the statistic

Treating interest or groups the persons a corresponding anticomplementary malecule. The polyportides are useful for disponeing
preventing or treating turnor formation. Coults dissame, inflammatory
bowed ideases, food poisoning, malecules, degenerative dissame, betterial
miderions, accreticalists are also useful degreestive dissame, betterial
mainties, the polyportides are also useful doctries easily or for wound
mainties. The polyportides are also useful doctries and proper
and descepture from anti-polyment may be useful for trigging oals to the express
and the extension of the coult will be a formation of the county
present extension structured presents and white it

This invention chaltes to the only and protein sequence of a movel human segmename polypeptide. The protein of the invention may be used to inhibit the protein of the invention may be used to segmenames mediated cleavage of agreemin in certified. The protein of sequences are not inhibit the opposition of the protein of the companion of the protein of the companion of the protein of the companion of the agreement protein of the invention of the companion of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protein of the protei

von Willabrand factor-Cleaving enzyme, applicable in disqunsis of, and supplementary therapy for, thrombotic thrombotycopenic purpura, and feveloping drugs for e.g. myocardial infarction and cerebral infarction. Claim 4; Page 92-101; 144pp; Japanese.

The invention comprises the mains acid and coding sequence of a von Millachand factor (wPP)-cleaving enzyme. The DNA and protein sequence of this invention are useful, in the disapposis and treatment of this compoundation purpura, and in developing drugs for mycoxadial.

In the disposite and treatment of this interpolycoper, purpose confirm the disposite and treatment of this interpolycoper, purpose confirm the disposite and treatment of this interpolycoper, the present and interpolating disposite or present of the protein and records. The present and not ocid sequence expressents a human von Nilabbrand factor (very) cleaving engage to procein.
                                                                                                                                                                                                                                                                                        9

Laryux carcinos associated protein. Dolygaptide for the treatment of extroke, its carcinosas, metratesis, arthritis, oeregorosis, kimune disorders, ortroke, itehemia, autoimmune disease, angiogenesis, skin disorders and ortram malfunctions autoimmune disease, angiogenesis, skin disorders and WPI; 2001-483569/52. N-PSDB; AAH47048.

Claim 1; Page 33-39; 47pp; English.

This seprements a human introduction associated protection! LuczDa-1) polymptide. The largotal in LuczDa-1 polymptide in the largotal in LuczDa-1 polymptide in the secondarial exception are enclosible; the largotal topopeptide and polymptication are enclosible; the largotal polymptide in the polymptide are made as a faithfull, osteopropia, a immune disorders, errore, declear, and enclosured feet and indicated and organ maifunction especially heart hyperstophy.
